The computing you see today at SC11 will enable tomorrow's discoveries

Computing: it supports a world of science

Look around you. The innovative computing solutions you see today at SuperComputing 2011 are changing the way we do science. Scientists and researchers are sharing computing power and data and collaborating in entirely new ways, thanks to the power of distributed computing.
Find out how.

An online magazine rooted in the research computing community

For over five years, International Science Grid This Week has shared stories from around the world about computing technology and the research it enables. As our readership has grown, we've evolved from a focus on grid computing to include other forms of distributed computing, such as clouds, volunteer and high performance computing. But we haven't forgotten our roots. Around 80% of iSGTW's readers are scientists, researchers, and computing experts.
